

Infinum - Wordpress Task

Instructions:

- Use the latest version of Wordpress.
- Database must have a custom prefix.
- You must use version control (more commits the better). - git/bitbucket
- Only submit your work- not *all* of the wordpress files
- All custom features must be inside project specific plugin

Before submitting:

- Add a database dump to the root of the project.
- Merge everything into master and tag version 1.0.
- Send us the link with your repo.

Tasks:

- 1. Edit wp-config to support different environment**
 - a. Be able to use the same wp-config to add credentials for development, staging and production.
- 2. Create a Theme**
- 3. Slice and implement the provided design**
 - a. Use your best judgement to decide on what is the content, and what are other stuff like widgets quotes, and how it will be best to implement that so that the editor can make changes.
- 4. Implement design inside custom post type - News**
 - a. Don't use default posts from wordpress; use custom!
 - b. Create custom taxonomy for news post type
 - c. Make the URL structure:
 - i. /news/category-name/ (Top Category)
 - ii. /news/category-name/sub-category-name/ (Sub Category)
 - iii. /news/category-name/sub-category-name/product-name/ (Single Page)
 - iv. /news/ (Display all news and all categories and subcategories)
- 5. Custom Ajax listing**
 - a. On the listing page, swipe pagination with *load more* via ajax
 - b. This should be loaded via action_hooks.

Bonus points:

- Boilerplate for plugin
- Use Wordpress Ajax
- *load more* should be reusable on other listings.
